

REST Planning And Implementation

Adam Smith

CS496 - Summer 2017

Root: <https://fine-loader-172219.appspot.com/>

URLs:

/boat

POST

- Creates a boat with the attributes that are submitted in the body of the request
- Does allow request to be submitted without a body. Boat object will be created with name, craft_type and length set to null.

Body

```
{
  "name": "{boatName}",
  "craft_type": "{craft_type}",
  "Length": {length}
}
```

Response

- Response includes the boat created and a url to itself labeled "self".
- Status 200

GET

- Returns a list of all boats.

Response

- JSON list of all boats
- Status 200

/boat/{boat_id}

GET

- Returns a single boat matching the boat_id.

Response

- Status 200

PATCH

- Modifies attributes of a boat.
- Will not update “at_sea” or “id_num” attributes.
- Does not require all fields to be modified. It will modify only the fields that were submitted in the body of the request.

Body

```
{
  "name":"{name}",
  "type":"{craft_type}",
  "length":{length}
}
```

Response

- Returns the modified boat object.
- Status 200

DELETE

- Deletes a boat matching the {boat_id}
- Will empty a slip if the boat is docked.

Response

- Status 200

/Slip

POST

- Creates a new slip with the attributes submitted in the body.
- Does not allow the request to be completed without a body.

Body

```
{  
  "Number":{slip_number}  
}
```

Response

- Responds with newly created slip details, including a link to itself labeled as “self”
- Status 200
- Status 400 if submitted without a body
- Status 403 if submitted with an invalid body

GET

- Gets a list of all slips

Response

- Status 200

/Slip/{slip_id}

GET

- Gets the slip matching the slip_id

Response

- Status 200

PATCH

- Updates the slip number to either the number provided in the body of the request or if none is provided, the API will generate a slip number.

Body

```
{  
    "number":{slip_number}  
}
```

Response

- Responds with the slip containing the updated slip details.
- Status 200
- Status 400 if the number submitted is not an integer.
- Status 403 if the number submitted is already in use.

PUT

- Replaces a boat in a slip with another boat.
- Sets previous boat's "at_sea" attribute to "True"
- Sets new boat's "at_sea" attribute to "False"

Body

```
{  
    "boat": "{test_boat}",  
    "date": "{date}"  
}
```

Response

- Responds with an array containing the slip and its updated details in position 0, and the new boat with its updated details in position 1.
- Status 200
- Status 403 if current slip is not already occupied.
- Status 400 if submitted without required request body.

DELETE

- Deletes the slip matching the slip_id.

- Sets a boat's "at_sea" to "True" if docked at the slip.

Response

- Status 200

/slip/boat/{slip_id}

GET

- Gets a boat at a slip

Response

- Responds with the boat details for a boat at the slip matching the slip_id
- Status 200

/slip/boat/details/{slip_id}

PATCH

- Adds or removes a boat at a slip matching the slip_id and sets the arrival_date.
- Sets "at_sea" to false on docked boat.
- NOTE: Request can be sent with an empty body. This will remove a boat from an occupied slip.

Body

```
{  
  "boat": "{boat}",  
  "date": "{date}"  
}
```

Response

- Responds with an array containing the slip and its updated details in position 0, and the boat with its updated details in position 1.
- Status 200
- Status 403 if slip is already occupied.
- Status 403 if boat is already docked.
- Status 400 if slip is empty.
